

Official statement On Choice Article by Gourmet Delight

Independent and accredited lab tests, both locally and internationally, have supported the outstanding quality of Gourmet Delight cat food, which is grain free, with natural real fish and chicken, and free from meat by-products.

Recently Choice called out one of our products as being deficient in calcium and fat, however independent and accredited lab tests on a large number of product samples were conducted, and the results were vastly different to Choice's one off tests, we used local and international accredited labs and all supported the positioning of Gourmet Delight.

We have engaged the ACCC, and they have affirmed that no action will be taken against our brand, based on our extensive and complete lab tests, so you can be assured of great quality cat food from Gourmet Delight, we stand by our quality and our products.
